Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 2 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☐ Responsive to communication(s) filed on ____.
- 2a) ☐ This action is **FINAL**. 2b) ☐ This action is non-final.

- 6) ☐ Other: ____.

DETAILED ACTION

1. Claims 1-7 are presented for examination.

Specification

2. The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

3. Applicant is reminded of the proper language and format for an abstract of the disclosure.

The abstract should be in narrative form and generally limited to a single paragraph on a separate sheet within the range of 50 to 150 words. **It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited.** The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided. The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.

4. The disclosure is objected to because of the following informalities:

Page 8, paragraph [22], lines 4, 5, 9, and 11, ignition coil 10 and hall sensor 10 each have the same item number.

Appropriate correction is required.

Drawings

5. New corrected drawings in compliance with 37 CFR 1.121(d) are required in this application because numbers and reference characters not plain and legible. Applicant is advised to employ the services of a competent patent draftsman outside the Office, as the U.S. Patent and Trademark Office no longer prepares new drawings. The corrected drawings are required in reply to the Office action to avoid abandonment of the application. The requirement for corrected drawings will not be held in abeyance.

Allowable Subject Matter

6. Claims 1-7 are allowed.

The prior art of record fails to teach in combination as claimed a system for inspecting the operation of an ignition system for vehicles having first and second analogue signal receiving sections each for receiving an input signal in the form of a high voltage waveform, which generated from an ignition plug through a connection channel of an external signal. A microcomputer having a program converting the analogue signal generated from the non-inverting amplifier into first digital signal, converting the second analogue signal into second

digital signal based upon an output signal from comparator, applying the reference voltage to the comparator, and controlling the system according to calculation and measurement modes of the converted digital signals.

Prior Art Made of Record

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure

A. Kravis (US Patent No. 6,426,626 B1) discloses a method and apparatus for testing spark plugs and ignition coils;

B. Ito (US Patent No. 6,606,551 B2) discloses a method and apparatus for determining malfunction of an engine system;

C. Johnson (US Patent No. 6,204,770 B1) discloses a sensor tester for testing multiple vehicle sensors.
